Adobe Photoshop was the first commercial piece of software that helped people to “show” their ideas to the world. However, most of us have already seen the cynical side of Photoshop. That happened because it was the first thing to use filters and techniques that we could make our own. Photoshop for designers usually means “photo manipulations”, which changed a contextual process that we perform to save time, to a complete media editing solution. Photoshop became famous because of its fast speed and its ability to use very simple processes. In a sense, Photoshop now allows the user to edit any content without any limitations and without any specific training. Thus, it allows everyone to create his own masterpiece. It is not a bad thing, it became what it is today. The user interfaces are useful and efficient. The “WYSIWYG” editor is a good thing, because it allows you to edit any content. However, you can always use the mouse to edit your image. This brought the Image Editor much closer to the actual processing and editing of image content. And finally, Photoshop’s effects are amazing. But, more than anything, it is valuable as a complete solution for media editing. You can use this solution to strip out any content from an image, rotate it, sharpen it, change its color, and even apply textures. In the end, you can create an image that you will be proud of. Spot healing is probably the most noteworthy feature of Photoshop. This means that the user can re-expose almost any part of an image, making it softer or less visible. As a result, we can make details more accessible without losing resolution and clarity. With proper focus, the algorithm can help us out of most problems.
