First of all, Thanks for the review! I absolutely love Lightroom and the new features are amazing. The new smart previews really make me happy! I'm working with D800 ES RAW files and mostly working in the Developer mode. So far I'm a happy camper. Unfortunately the performance in the Developer mode is not really good. It's not exactly slow, but it's not fast either. I'm not sure why – it doesn't make any sense to me that the algorithm that clears the memory is slower than the normal operation of the engine! To work around that I'm now working with "DNG Segmentation" files in the Library. I'm really anal about having clean DNG files in the library. All noise remnants are gone. But when I need to zoom in and refine something I really notice the performance drop. I hope Adobe solves this problem – performance is really a killer for me with the new smart previews. However, I can't use the brushes at all in the library mode! I'll try DNG Lightroom 5.4 beta to see if it improves performance. Pretty please Adobe. :) "Adobe Photoshop Review" is very good and it is informatif. It's a pleasure to read it for me because I also use Photoshop and Lightroom every day before I work for my client. In the past, I did modify the.dng files by adding more information to it because I didn't found a good way to have the retain depth information. So I then modified it manually with Photoshop. Now, Photoshop is no longer able to make this modification and that's a big deal. But from what I understand, it's not the job of the software to do what I want to do. I have to understand that I use.dng as metdata and not for editing. So I'll have to find a plugin or a application to modify the.dng file with my modification. It's a bit sad go go back to the pre-LR4 days when Photoshop can do everything I want."

Dreamweaver : Always was a favorite among designers for web-based design. However, Photoshop is far better when it comes to editing of images. If you plan to edit the images in the web, it is better to use Photoshop rather than Dreamweaver. It offers extreme control over the design elements, including changes to fonts, colors, image adjustments, masks and blending modes. It is considered one of the most prolific image manipulators and what makes the work is that it is entirely a right-click button tool with powerful features absolutely free. Adobe Photoshop is still considered as the number one software when it comes to giving editing the images a complete overhaul. If you are into designing pattern, photo manipulation or graphic and web design, this software would be the best choice to edit anything you want. Below are some of the features of Photoshop that makes it the best software. With the Adobe Photoshop App, the most advanced features are totally free, and in a new version, Photoshop also includes the touch. it is considered as one of the best and free photo editing tools. General changes to the UI include a redesigned toolbox, a re-envisioned Layers panel, new Effects panel, and a new Photo/Video panel. The toolbox has been totally revamped, with a more compact appearance. While the Layers panel has been improved with the ability to navigate and zoom, the panel has a more immersive feel thanks to the redesigned toolbar. The new panel optimizes the appearance of the workspace. The new Photo/Video panel lets you interact with images directly within the Panel.
